MURRAY

Approach

1. Gather Information on:
 - a. Property
 - b. Identify existing utilities and utility ownership in area.
 - c. Identify needed utilities
2. Plans are needed in electronic and paper format with the following information:
 - a. Existing Property, and structures.
 - b. Proposed building and possible uses.
 - c. Proposed site utility plan with profiles.
3. Pre submission meetings are recommended as to avoid costly revisions.
4. Submit plans to the Murray City development building office at 4646 South 500 West, 1st floor. Plans will be taken in and logged into the system for comments from all needed departments. If any department requires change the plan changes are submitted again to the Murray City development and building office.

Pre Construction

Once plans have been signed by all the required departments the contractor must set up a pre-construction meeting through the City Engineering department. They will send out an invitation to all the necessary personnel and departments that would need to be part of this meeting.

Other departments might include:

Murray City Engineering dept., Wastewater, water, Storm drain, Power dept., planning & zoning, police and fire.

Things that are needed at the Pre-Construction meeting:

- Have adequate plans available
- Be prepared to explain in detail what your project includes.
- Give a proposed schedule for each phase along with an initial start date.
- Demonstrate that you have met all of the City's bond requirements for working within Murray City rights of way.
- Traffic control plan

All construction activities must be done in accordance with contractors Health and Safety plan which must comply with all of the OSHA regulations.

Construction

- Normal city hours are from 7:00 am to 3:30 pm, Monday through Friday, Contractor may be charged for overtime beyond these hours.
- Murray City will be given 24 hour advance notification of when work is to begin and 48 hours notice for weekend work.
- It is unlawful for any person to open any sewer manhole without permission from Murray City.
- Murray City personnel shall inspect all work being performed and nothing shall be buried until approved by an authorized inspector.
- Any disruption of service shall be up to the contractor to contact all affected, giving contractors name, and phone number, as well as time frame for completion.
- Contractor must have physical address of the location where inspection is to be performed. Subdivision and lot numbers are not acceptable addresses.
- All as-builts shall be submitted to Murray City when construction is complete

Kind of Pipe

The contractor will exercise such measures to maintain the quality of material incorporated in the work, Materials not meeting Murray Cities standards will be considered defective and will be removed immediately from the site.

Poly Vinyl Chloride: (PVC) bell and spigot gasket joint, glue joint not allowed, and shall have minimum wall thickness conforming to ASTM, with the minimum classification of SDR 35 pipe, latest edition.

Ductile Iron pipe: Shall conform to the requirements of AWWA C151. Pipe shall have mechanical or push-on joints.

Concrete pipe: Joints shall be of the bell and spigot type with a rubber “o” ring type gasket that forms a watertight seal.

Repair of Pipe

- All damaged pipe must be removed, to insure all damaged pipe is removed a visual or closed circuit T.V. inspection of existing pipe shall be performed. If different pipe is used than what is existing, transition coupling with stainless steel shear bands (Fernco type or approved equal) are to be used, in order to join different thickness of pipe, while maintaining the same inside pipe diameter. Use of any other shear band coupler needs to be approved by Murray City.
- All pipe shall be clean and free of debris, when installing
- Proper bedding and blinding of pipe (see bedding and blinding materials) shall be followed. Before performing the repair, consult Murray Cities Wastewater department.
- Murray City personnel will inspect all work being performed and nothing shall be buried until approved by an authorized inspector.

Bedding and Backfill Requirements

One Foot of 3/4 inch minus gravel to be used under the pipe, and one foot of 3/4 inch minus gravel to be used over the pipe. Anything that deviates from these requirements must be approved by Murray City personnel. All backfill placed in the trench shall meet specified gradation and compaction requirements. Native material shall be allowed only if meeting the specified gradation and compaction required and approved by the engineer.

Taps (Connections to City Main)

All taps made on sewer mains, whether City owned or private must meet the City standards.

City owned mains: Contractor is responsible to provide a safe excavation so the City can perform the tap.

Privately owned mains: Contractor must notify the City 48 hours in advance before work is to be performed, the City can be reached at 801-270-2467. Work must be completed per City requirements and the City will perform and record all inspections.

The tap fees are:

4" and 6" = \$ 250.00

Lateral Diameter and Slope

Sewer laterals shall be designed and installed with a minimum of 2% slope for 4" pipe and 1% with 6" pipe. Anything larger must be installed per mainline specifications. All laterals test tees, clean-out tees and caps shall be installed and set in accordance to the city's specification.

Lateral Placement

The lateral shall not be placed under a concrete driveway. Placement is recommended close to center of property, to allow most other utilities adequate space. Existing laterals may be used upon approval by the city. It will be the homeowner/contractor's responsibility to CCTV the lateral to determine the condition of the pipe. The city can require the lateral to be lined in order to be used.

Lateral Abandoning

Lateral must be cut as close to possible at back of sidewalk or if no sidewalk back of curb. Expandable plug must be used to plug line as well as a 1 bag of concrete mixed and placed over the plug. Inspector must visibly see both the expandable plug and the concrete in order to be approved by the inspector.

Abandonment agreement must be completed and signed by all applicable parties.

Lateral Pipe Lining

All pipe liners must meet NASSCO specifications or National Liner specifications. Anything deviating from this must be approved by Murray City.

Cleanout Placement and Type

Connecting to existing pipe, or installing new pipe from the main line, a “test T” is required to test the pipe installed, for placement of “test T” consult Murray City Sewer Dept. The wye connection between the lateral and cleanout must be PVC and or cast iron using transition couplings with stainless steel shear bands (Fernco type or approved equal). The preferred installation method is to use a combination wye using a PVC standpipe with a water tight cast iron cap with a brass screw type lid. Clean-outs can be installed anywhere between the sidewalk and the structure. It is recommended that it be placed closer to the structure. Maximum spacing for cleanouts will be 100 feet. Cleanout must remain visible and accessible at all times during and after construction. Cleanout that must be placed in concrete must have Cast iron triangular box placed over cleanout and must be poured flush with the concrete. It is recommended that an irrigation style box be placed over any cleanout in a landscaped area.

Fittings

In a new installation there should be no fitting with the exception of the test tee and clean out wye. Each joint or fitting must be water tight and free from defects. Bell to spigot gasket joints only and no glue joints are allowed. If a repair is being made all transition couplings must have stainless steel shear bands or Fernco type approved equal.

Lubrication for Gasket Joints

The lubricant used in joining pipes will be recommended by the pipe manufacture.

Pipe Testing

Laterals: A “test T” shall be installed where you are connecting to a new or existing pipe, when the proper gravel base (bedding), and pipe to grade, fill with water up to top of cleanout. Any other testing methods shall be approved by Murray City Wastewater department prior to beginning project.

Mainline pipe (6" and larger): requires a licensed pipe tester to pressure test, with City Inspector present. Must have trench backfilled, with adequate pressure on the pipe. All pipe must be cleaned by contractor. The City shall perform a closed circuit televising inspection of the inside of the pipe. All pipe must be free of dirt and foreign material by the contractor before the system is accepted.

Drop Manholes

All drops into manholes shall be inside drops as shown in the attached drawings. All drops require the Reliner Bowl or a City approved equivalent, with the bowl and piping restrained to the manhole walls as described on page of the drawings.

RV Dump/Washout

RV dumps/washouts are only allowed by permit. Permit must be filled out and inspection performed by Murray City before RV dump will be accepted. Murray City will conduct an annual inspection to ensure enforcement of locks on caps. If upon inspection the RV dump is not in compliance Murray City reserves the right to discontinue the use of the RV dump.

Material Specifications

	Pipe		Clean Out Caps
	Pipe size and material shall be approved by Murray city wastewater department.		Must be brass twist on cap
	Shear Band Connectors		Manhole Ring and Lids
	All connections must be stainless steel shear band (ferenco or approved equal by Murray City)		Lid Shall be cast with Sewer label
	Inserta Tee		Mechanical Test Plug
	Use for service connection to Existing main		Use for abandoning existing manhole
	Cast Iron Wye		Pipe Lubricant
	Cast iron wye required on all cleanouts with shear band connectors		Must be lubricant recommended by the manufacturer
	PVC Wye		PVC 22'
	Must be appropriate size for the pipe.		Must be appropriate size for pipe
	PVC 45'		Kor N Seal Flexible Boot
	Must be appropriate size for pipe.		Boot for connection to manhole.
	RV Cleanout Caps		Kent Seal
	Must be metal and have a lockable cap.		

Typical Sanitary Sewer Manhole

MURRAY

RUBBER BOOT DETAIL

NOTES:

1. MANHOLE SIZE:
 - A. DIAMETER IS 4 FEET: FOR SEWERS UNDER 12" DIAMETER.
 - B. DIAMETER IS 5 FEET: FOR SEWERS 12" THROUGH 24", OR WHEN 3 OR MORE PIPES INTERSECT THE MANHOLE.
 - C. CONSULT WITH MURRAY CITY FOR SEWERS LARGER THAN 24".
2. PRECAST REINFORCED CONCRETE MANHOLE SECTIONS SHALL CONFORM TO ASTM C 478. JOINTS SHALL BE RUBBER GASKET, OR SEALED WITH APPROVED SEALANT.
3. CONCRETE: CLASS 4000, APWA SECTION 03 30 04.
4. GROUT: 2 PARTS SAND TO 1 PART CEMENT MORTAR, ASTM C 1329.

Typical Poured In Place Manhole

MURRAY

Typical Drop Manhole

MURRAY

NOTES (CONTINUED):

5. THE INVERT CHANNELS SHALL BE SMOOTH AND SEMICIRCULAR IN SHAPE CONFORMING TO THE INSIDE OF THE ADJACENT SEWER SECTION. CHANGES IN DIRECTION OF FLOW SHALL BE MADE WITH A SMOOTH CURVE AS LARGE A RADIUS AS THE SIZE OF THE MANHOLE WILL PERMIT. CHANGES IN SIZE AND GRADE OF THE CHANNELS SHALL BE MADE GRADUALLY AND EVENLY.
6. THE FLOOR OF THE MANHOLE OUTSIDE THE CHANNELS SHALL BE SMOOTH AND SHALL SLOPE TOWARD THE CHANNELS NOT LESS THAN 1 INCH PER FOOT NOR MORE THAN 2 INCHES PER FOOT. WHERE DROP BOWL AND PIPING CANNOT BE USED, PROVIDE SMOOTH TRANSITION INTO TROUGH AS DIRECTED / APPROVED BY CITY.
7. STEPS AND ECCENTRIC CONE REQUIRED FOR MANHOLES WITH DEPTHS (FROM LID TO FLOW LINE) GREATER THAN 5 FT. STEPS FOR PRECAST MANHOLES AND CAST-IN-PLACE VAULTS SHALL BE POLYPROPYLENE COATED STEEL STEPS WITH 1'-0" MAXIMUM SPACING.
8. PIPE CONNECTIONS TO EXISTING MANHOLES SHALL BE MADE IN SUCH A MANNER THAT THE FINISH WORK WILL CONFORM AS NEARLY AS PRACTICABLE TO THE ESSENTIAL APPLICABLE REQUIREMENTS SPECIFIED FOR NEW MANHOLES, INCLUDING ALL NECESSARY CONCRETE WORK, CUTTING, AND SHAPING.
9. STABILIZATION MATERIAL SHALL BE WRAPPED IN A GEOTEXTILE MEETING THE REQUIREMENTS OF APWA 31 05 19.
10. COORDINATE WITH CITY SO THAT CITY CAN PLACE INVERT COVERS DURING CONSTRUCTION.

Manhole Collar

MURRAY

SECTION

1
—

MANHOLE COLLAR

FRAME AND COVER

SECTION

2
—

NOTES:

1. CONCRETE SHALL BE CLASS 4000 AS PER APWA SECTION 03 30 04. U-CART OR HAND MIXED CONCRETE WILL NOT BE ACCEPTED.
2. REINFORCEMENT SHALL BE ASTM A 615, GRADE 60, DEFORMED BARS AS PER APWA SECTION 03 20 00.
3. BACKFILL WITH GRADE 1 UNTREATED BASE COURSE AS PER APWA 32 11 23 2.1.
4. GRADE RINGS SHALL BE APWA STANDARD PLAN NO. 361.
5. CONCRETE COLLAR SHALL BE APWA STANDARD PLAN NO. 362.
6. LID SHALL BE CAST WITH "SEWER" LABEL.

Abandon Existing Manhole

MURRAY

ABANDON EXISTING MANHOLE

NOTES:

1. RESHAPE AND FILL EXISTING CHANNEL AS NECESSARY TO PROVIDE SMOOTH CONTOUR BETWEEN INCOMING AND OUTGOING PIPES.
2. CONCRETE: CLASS 4000, APWA SECTION 03 30 04.

ABANDON PIPE AT EXISTING MANHOLE

Typical Sewer Lateral and Cleanout

MURRAY

TYPICAL SEWER LATERAL

SERVICE CONNECTION TO NEW MAIN

SERVICE CONNECTION TO EXISTING MAIN

NOTES:

1. SERVICE LATERAL SHALL BE 4" OR 6" AS SHOWN ON PLANS OR AS DIRECTED BY CITY.
2. SEWER LATERALS SHALL CONNECT TO SEWER MAIN AT 45° ANGLE.

Typical Cleanout Detail

MURRAY

NOTES:

1. SIZE OF PIPING AS SHOWN ON DRAWINGS OR AS DETERMINED BY CITY.
2. PVC JOINTS SHALL BE GASKETED JOINTS. NO GLUE JOINTS ARE ALLOWED.

Lateral Replacement For New Utility

MURRAY

Typical Trench Detail

MURRAY

TYPICAL TRENCH SECTION

NOTES:

1. ASPHALT PAVEMENT REMOVAL: (REMOVE PAVEMENT AS SPECIFIED IN APWA 02 41 14):
 A. MILL OR SAW CUT FULL DEPTH OF ASPHALT TO PROVIDE STRAIGHT VERTICAL PAVEMENT EDGE FOR PAVEMENT REPAIR.
 B. IF A LIP OF GUTTER, A CURB, OR AN EDGE OF THE PAVEMENT IS WITHIN 2-Feet OF THE NEW PATCH, REMOVE EXISTING PAVEMENT TO THE STREET FEATURE. RETAIN AND PROTECT EXISTING CURB AND GUTTER.
2. TACK COAT: PROVIDE FULL TACK COAT COVERAGE ON ALL VERTICAL SURFACES.
3. JOINT REPAIR: WHERE CRACKS OCCUR BETWEEN THE PATCH AND ANY EXISTING PAVEMENT OR ANY STREET FIXTURE, REPAIR THE CRACK PER APWA 32 01 17.
4. TRENCH EXCAVATION IN ACCORDANCE WITH APWA 31 23 16, OSHA, AND UOSH SAFETY STANDARDS.
5. ALL BACKFILL PLACED IN TRENCH SHALL MEET SPECIFIED GRADATION AND COMPACTION REQUIREMENTS. NATIVE MATERIAL SHALL BE ALLOWED ONLY IF MEETING THE SPECIFIED GRADATION AND COMPACTION REQUIREMENT AND APPROVED BY THE ENGINEER.
6. COMPACT BACKFILL MATERIALS IN ACCORDANCE WITH APWA 33 05 20, 31 23 26, AND UDOT 02721 (AS APPLICABLE). TRENCH BACKFILL IN UDOT RIGHT-OF-WAY SHALL BE COMPACTED TO 97% OR GREATER, MODIFIED STANDARD PROCTOR. TRENCH BACKFILL IN ALL OTHER STREETS SHALL BE COMPACTED TO 95% OR GREATER MODIFIED STANDARD PROCTOR (PER ASTM D 1557).
7. ENGINEER MUST APPROVE USE OF TRENCH STABILIZATION MATERIAL. IF TRENCH STABILIZATION MATERIAL IS USED, TRENCH STABILIZATION MATERIAL AND PIPE BEDDING SHALL BE SEPARATED USING GEOTEXTILE MEETING THE REQUIREMENTS OF APWA 310519.
8. PIPE ZONE MATERIAL TO BE A-1-a OR A-1-b ASTM D 3282 3/4" MAXIMUM PARTICLE SIZE. PEA GRAVEL AND "SQUEEGY" IS NOT ALLOWED IN ANY PART OF THE PIPE ZONE. MATERIAL SHALL BE PLACED IN LIFT NOT EXCEEDING 8" AND COMPACTED TO A MODIFIED PROCTOR DENSITY OF 95% OR GREATER (PER ASTM 1557) WITHOUT DAMAGING OR DEFLECTING PIPE.
9. PROVIDE AC-20-DM-1/2 ASPHALT CONCRETE UNLESS OTHERWISE DIRECTED BY ENGINEER.
10. RECYCLED ASPHALT SHALL NOT BE USED FOR BACKFILL IN ANY PART OF THE TRENCH.

Grease Trap And Sampling Manhole

MURRAY

All commercial establishments where food is prepared shall be required to use a grease interceptor. Each individual establishment must have a separate grease trap and separate sanitary connection. For full description of GOSI code please refer to Murray City Code book located on www.murray.utah.gov. Anything deviating from these requirements must be approved by the Public works director or designee.

Grease Trap Cont.

MURRAY

TYPICAL GREASE TRAP

LID PLAN

SECTION 1

SECTION 2

NOTES:

1. MINIMUM VOLUME CAPACITY: 1,000 GALLONS.
2. CONCRETE: CLASS 4000, APWA SECTION 03 30 04, PLACEMENT PER APWA SECTION 03 30 10, PROVIDE 1/2-INCH RADIUS EDGES. APPLY A BROOM FINISH. APPLY CURING AGENT.
3. REINFORCEMENT: DEFORMED, 60 KSI YIELD GRADE STEEL, ASTM A 615, PLACEMENT PER APWA SECTION 03 20 00.
4. PVC PIPE: APWA SECTION 33 05 07.
5. SEAL ALL WALL PENETRATIONS.
6. PROVIDE TWO 30" DIAMETER ACCESS OPENINGS WITH FRAME AND COVER (ONE FOR EACH SECTION OF GREASE TRAP).

Murray City Minimum Pipe Grade

Size	Minimum Grade	Type of Access
4"	2%	4" Cleanout
6"	1%	6" Cleanout
8"	0.40%	4 FT Manhole
10"	0.28%	4 FT Manhole
12"	0.22%	5 FT Manhole
15"	0.15%	5 FT Manhole
18"	0.12%	5 FT Manhole
21"	0.10%	5 FT Manhole
24"	0.08%	5 FT Manhole

Murray City minimum Main Line size is 8 inch. Anything deviating from these requirements must be approved by Murray City.

Please reference city website for impact fees, sewer rates.
